Divisions

Asia Plastic Factory – Riyadh

We are flexible packaging converters, committed to supply innovative and customer oriented packaging solutions. Our industry has vast range of services such as printing, lamination, bag making and water labels or sleeves.

Asia Plastic Factory - Rabigh

We are specialized in manufacturing 5 – layers co-extruded PE films with different design solutions for some of the most demanding applications. Based on our customer requirements we produce film rolls and bags accordingly.

Corporate Overview

Asia Plastic Factory

Asia plastic factory is an innovative company established in 1996, specialized in flexible plastic packaging and multilayer film structures per customer's needs. Our methods ensure customers a fine reduction in process cost and enhance their profit. Our machinability leads to less process time, aesthetics to their products and less use of raw material with best properties.

We are the first manufacturer of 5-layer Co-Extruded films in the kingdom of Saudi Arabia. Combining the latest technology and best resin, we have raised the bar of performance.

Asia plastic means;

“Perfection in performance”

Corporate Ethics

Quality & environment

The management procedure developed by Asia Plastic Factory allows it to achieve an extremely high degree of efficiency and flexibility in meeting the specification and demand of our customers.

Asia Plastic Factory is an ISO certified company since 2010. Asia Plastic is using latest technology of production machines and equipment and is committed to investment in product innovation.

We are equipped with modern quality lab and department, which strictly follows technical parameters as per ASTM standards. We are committed to focus on energy, material waste disposal and decreasing pollution in our environment.

Developments

We specialize in providing reliability, quality and improved artistic products that satisfy both small and large customers by sourcing the best raw material. Our quality is supported by strict control measures, that ensures the customers not only get the best products with the best quality but also the value for their money. Extensive sustained demands testify that our commitment to quality is indeed a wise and sound philosophy.

We will take customer's pain to solve their problems of inventory and delivery with our flexible manufacturing facility. We will provide fast and easy communication process and after sales-services to our valued customers, as our main goal is to obtain and maintain **Customer's Satisfaction**.

We aim to build long term healthy relationships with all the clients by understanding their needs and targets and by providing them with the best services to maintain their image in the most attractive and positive way.

Corporate value

Sales management

Asia Plastic's sales team, is dedicated, multilingual and they can keep in touch with your teams in charge of procurement, quality and development. They will give day-to-day surety and follow up with your needs.

Technical assistance

Our technical assistance team will provide you with support on your production for any technical solution or advice you require. They are capable of dealing with test implementation and project launching as partner to the major line manufacturers. Our team is a key element to our client's productivity and cost saving.

Production Portfolio

Multi layer collation shrink films

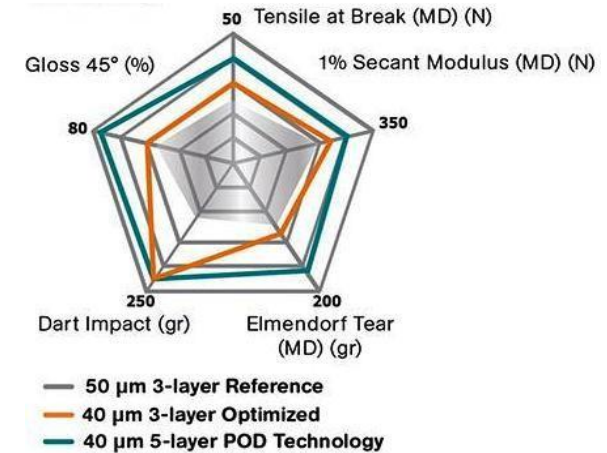

ASIA Plastic is dedicated to its client by innovation and constant developments with higher technical features, optical qualities and reduced thickness of film.

Asia Plastic offers the leading wrapping films in the industry. Optimizing your packaging lines with attractive quality and price ratios. In addition the brightness of our films and the availability of up to 9 colors are significant advantages for your products on the market shelf. Our vast innovative ranges comes with various technical properties in term of rigidity, thickness, clarity and shrink rates.

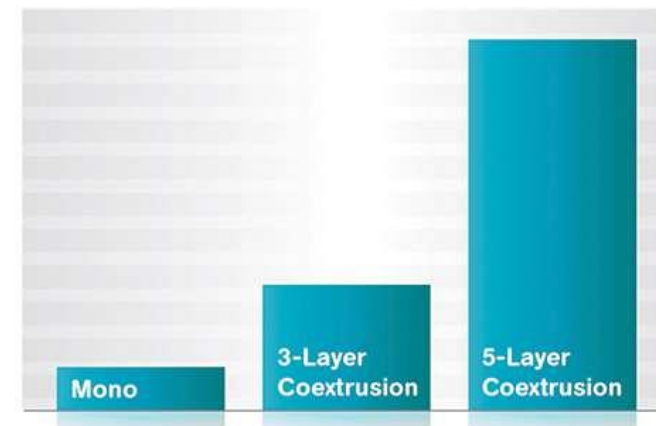

Best cost reduction solution through down gauging

- 10% to 25% compared to traditional collation shrink films.
- 50% compared to conventional method of packaging

Sparkling messages and identification of brand through tremendous film clarity and gloss. Strong mechanical properties such as tensile, impact, tear etc. to hold up your product with strength and minimizes the damage through out transportation.

More Layers=More Design Flexibility

Production Portfolio

Bio degradable shrink film

Asia Plastic has developed the Oxo-bio degradable shrink film which oxidizes after the end of its lifespan through oxygen and heat. It is acceptable by environment and disappears leaving only water, carbon dioxide and biomass.

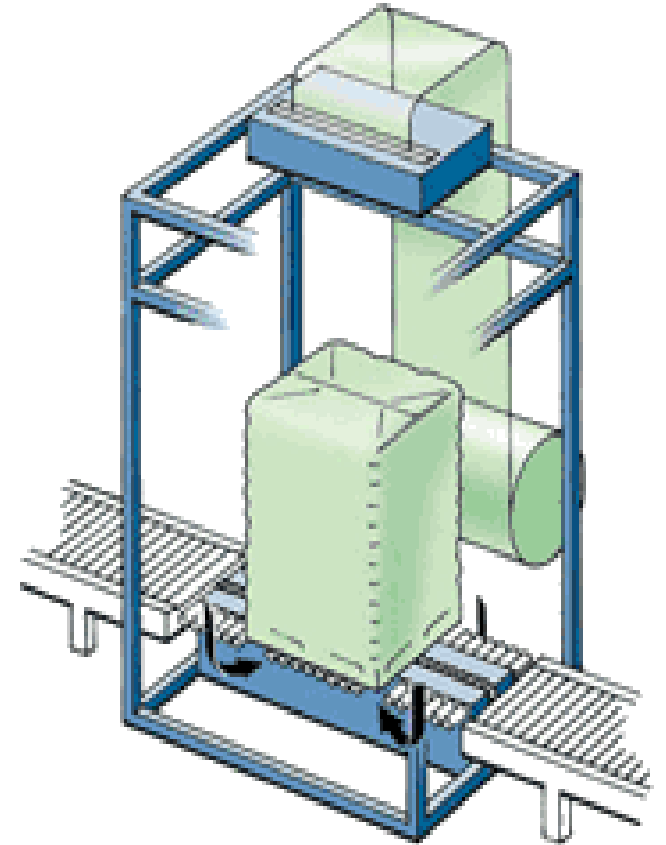

Production Portfolio

Stretch hood films

We can provide our customers with;

- High elasticity with maximum stability and retention force.
- No use of thermal energy.
- Ability to pack heat sensitive goods.
- Excellent aesthetic due to smooth surface and high transparency.
- Water proofing of your product.
- Printability.
- One film size can be used for different pallet sizes.
- Recyclability.
- No adherence to plastic films.
- Superior tear resistance.
- High toughness.
- Excellent yield.

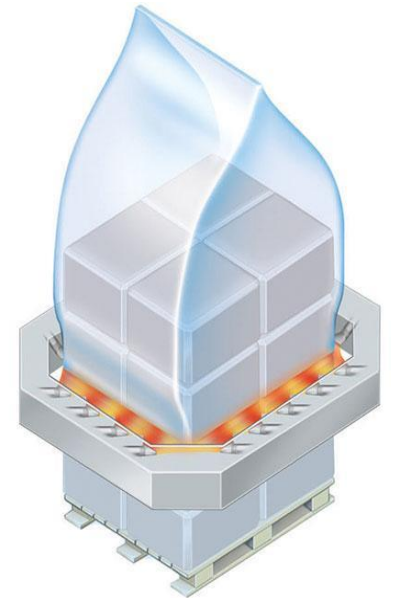

Production Portfolio

Shrink Hood films

Shrink hood films can be used on different products like containers, glass, cement, ceramic etc. for pallet wrapping. They provide reliable packaging due to strong puncture resistance.

- It has different percentages of shrink ratios.
- Very high puncture resistance with thickness between 100mic to 200 microns.
- Printable.
- Ultra Violet stabilization.
- Reduce freight costs without any need of secondary packing.
- Keeps your product tidy.
- High clarity and performance.
- Keeps the product safe from sudden impacts or sun radiation.

Production Portfolio

5-layer specialty films

High oxygen barrier film, designed for packaging of perishable products like beef, processed meat and other applications which requires longer shelf life.

High gas permeability and is designed for packaging of fresh poultry

Production Portfolio

High barrier films

- Asia Plastic sophisticated specialty films are used to protect food from environment physically and chemically. It can prevent permeability of oxygen, carbon dioxide and nitrogen easily.
- Asia Plastic is using the most advanced method and technology to produce these high barrier films which can meet the market's demand and lead their customer towards innovation which will provide them added values in market

Properties:

- High tensile strength and resistance of bursting, puncture and crack.
- Environmental continuous stress can never be harmful due to high barrier properties.
- Excellent clarity and gloss make your product prominent in market.
- Resistant to fats, oil, alkalinity and organic solution.
- Ease of high definition printing.

Application:

Cheese, dates, liquid pouches, meat, cereals etc.

Production Portfolio

Printed and laminated structure pouches and gift wraps

We provide our customers with solutions to keep their products safe from environmental hazards and give their products immense aesthetics so that products are visible prominently in market shelves. For this we are making different kinds of laminated structure by using all grades of BOPP, PET, PE and CPP for commodity items, food, snack, frozen goods, powdered milk, ketchup, chocolates, chips, bakery etc. We provide 2 ply and 3 ply structures with excellent multi-color printing.

We also provide services of producing gift wraps which will add value after being wrapped over on bakery items or fresh flowers.

Production Portfolio

Plastic bags and shopping bags

We are able to produce for our customers different kinds and styles of top-notch plastic and shopping bags as per their required specifications.

- Patch handle.
- Loop handle.
- T-shirt handle.
- Tissue paper box and roll bags.
- Frozen product bags.
- Chilled product bags
- Diaper bags
- Courier bags.

Production Portfolio

Water bottle wraps and labels

Using high performance extrusion technology APP is producing PVC shrink films especially for bottle labels. We are also printing pearl film for making water bottle label rolls.

This is low cost and high performance solution, easy printing, high speed process and reduction of converting operations
